

DD-955

PRODUCT NAME

DD-955

RECOMMENDED USE

Multicharged viscosifier and shale clay saprolite kimberlite & talc stabilizer

PRODUCT DESCRIPTION

DD-955 is a multi-charged viscosifier and formation stabilizer specifically for use in areas plagued with shale and clay instability problems. Due to its ionic charges, DD-955 is absorbed directly onto shales and clays, thereby preventing the water damage that causes loss of core and hole stability. Once absorbed onto the formations, the stabilizing effect imparted by DD-955 will remain resistant to any chemical changes in overall mud properties caused by varying geological and drilling conditions. DD-955 effectiveness is enhanced when used with Bio-Cut Plus and Torqueless.

SUGGESTED DOSAGE

For normal drilling, use 1 quart, more or less, of DD-955 per 100 gallons (2.5 litres / 1000 litres) of water. Use up to 2 quarts per 100 gallons (5.0 litres / 1000 litres) for difficult areas. Due to water composition and drilling conditions these dosages may vary.
